Details

Ryan is a junior at Pace University. Not only is he swarmed with assignments, but he has also just started to notice strange skin lesions on his arm. Although he wants to get his skin checked, he just doesn't have time to waste in his schedule to check-in to a doctor's office or urgent care facility if it is not necessary.

Goals

Ryan needs a cursory method of diagnosis for his abnormality, *without* having to pay a physical visit to some medical facility.
Our SymCheck application can solve this dilemma, and if the application identifies his lesions as to serious or even life threatening, it can recommend him to visiting a doctor or the nearest hospital, in which case Ryan will *know* that a visit to a doctor becomes a priority

PERSONA # 2: COLLEGE STUDENT
